VOLUME XXVIII. PHILADELPHIA, SATURDAY, SEPTEMBER 30, 1848. WHOLE NO. 1418.

Original Poetry.

THE

BEGGAR OF NAPLES

WRITTEN FOR THE SATURDAY EVENING POST, BY THOMAS BUCHANAN READ.

The music of the marriage bell
Woke all the morning air to pleasure,
And breaths there were that rose and fell
To the delightful measure.
Oh, well it were if they might hear alway
The music of their nuptial day
Flowing as o'er enchanted lakes and streams,
Out of the land of dreams—
Sweet sounds that steal but never cease,
Dropt from celestial bells of peace.

Oh, well it were if these sole bridal flowers
Had drunken deep of life's perpetual dews,
Had drunken of those charmed showers
Forever falling in unbroken hues
Through the far living skies,
Beyond the flaming walls of long that Paradise—
Or grown beside that fabled river
Whose is a spring time ever,
Where, when the aged pilgrim stooped and drank,
He rose again upon that precious bank
In all the bloom of youth to linger forever!
Ah, sweet Beauty! transcendent Beauty!
If they might but end here in life's autumnal hues
For she, who wore that bridal wreath
Was Naple's fairest child,
The fairest and the most to be inspired
As Abbot of a project of hymn,
And he who took beside her vows
Was Fame and Fortune's richest son,
One who had spoken long fame
To dance like a new discovered star,
Yet as they passed between the crowd
He looked he mournfully on poor
But to the bridegroom and bride alone
Had read the golden page of prophecies true,
And smiled to see them pass
And passing, sighed and said the bride
The merry bells make music sweet,
But never to the happiest bride
Was music half so dear and clear
As the chime of gold which it makes the heart—
It drives away back to another wedding,
And bids us hear the sweet vows we heard
Then ever bells will ring or
Know not the joy that we knew
Or look on such a bride
The chime is the sweet music of a long
Such nights to me will a wedding
The story of a beggar, who
Yet know has ever been
And he is the hale one will be said
To wile away the idle and
That seems as from an angel
Of a wedding bell
Whenever the merry gray-haired bongs
A pleasantly pleasure on our songs
But nothing so of a pleasure does
As does it and sad to Matthew

According every world shall
The sunshine smiled to every spirit—
As into a tomb or a pile broke
For one sad and sweet day
And held an emotion in their waking pulses
Which never on looked to glowing skies
Then up the bell the bride's face
To wear smile a happy chime
And the chime was so sweet that long
That it bells to blow, dreamy now
Lost to Naples
Lost to Naples
Long had been a world of happy time
Long had been a world of happy time
Long had been a world of happy time

The Old Times.

WHAT OUR GREAT-GRANDFATHERS DID.

THE PAXTANG MASSACRE.

However the Quakers of Pennsylvania might have conversed the Indians by giving them trifling equivalents in exchange for their valuable lands, personally they treated them kindly and well, and sought to gain their good will by acts of forbearance and mildness. Their policy had always been to maintain peaceful relations with them, an object in which they had been uncommonly successful, even when surrounding colonies were involved in war. The machinations of the French, however, had induced some tribes to raise the hatchet, and their predatory excursions and savages were severely felt. The defeat of Braddock, in 1755, was a most disastrous circumstance; and the hostile Indians, emboldened by so great a victory, ravaged the country through a series of years. The County of Lancaster, Northampton, and Berks, experienced the cruelties of the savage knife. Scarcely a week passed by without some instances of barbarity, and the inhabitants were kept in a constant state of alarm. The Friends, notwithstanding, hoped to perpetuate peace and soften the aborigines by friendly offices; and, in order to succeed in such a humane purpose, many of them joined in 1756 in an association styled "The Friendly Association for Regaining and Preserving Peace with the Indians," and raised several thousand pounds to enable them to carry out their benevolent designs. They addressed Governor R. H. Morris, in 1756, "something like not to declare war against the Indians until they had first tried to bring about a peace by pacific and friendly offices. Failing in this and in their effort to move the General Assembly, they Addressed the Governor of New York, and did all in their power to peacefully avert the dread barbarities of the savage foe. It may be supposed that these designs met with but little sympathy from a large class of inhabitants, who, outraged by continual aggression, believed the only remedy was in the sword. The colony was distracted by fierce discussions on the subject, and the opponents of the Association boldly charged the Friends with treasonable designs. There were some who added to these feelings of provoked hostility, the still stronger prejudices of bigotry and intolerant sectarianism. The looked upon the entire aboriginal race as heathen, whose extirpation was a work almost of divine command.

None were stronger in these feelings than the settlers of Lancaster County, in Donegal and Paxtoo, or Paxtang township. They were almost all Irish and Scotch, professing stern, uncompromising Presbyterian tenets. A colony of Christian Indians, of the Moravian sect, were settled at Conestoga, and during the entire period, when the ravages were taking place around them, professed themselves friends of the whites, and kept aloof from the warfare. They were, however, objects of great suspicion to their neighbors, who, unreasonably prejudiced, suspected without reasonable cause. Under a pretence that they had countenanced some of the attacks of the hostile Indians, a party of armed men from Donegal and Paxtang townships, on the 14th of December, 1763, attacked the Moravian village at Conestoga, and killed fourteen of the Indians, among them, Shabosa, a chief, always distinguished by friendship for the whites, and some women and children. Affrighted at the circumstance, the Indians, instead of resisting, fled to Lancaster for refuge. There they were placed for safety in the work-house.—But the fury of the assassins was not allayed by their first massacre; they assembled in great numbers, and repairing to Lancaster at mid-day, forced open the prison, and butchered in cold blood, the unoffending and miserable wretches they found within its walls. The authorities and citizens of Lancaster did nothing to resist this outrage; they had sufficient means to have prevented it, but instead of interfering, they rather countenanced the revolting monstrous. Unarmed and unprotected, the Indians prostrated themselves with their children, before the murderers, protesting their innocence, and their love for the English, and in this posture they all received the hatchet.

The story of this remorseless and bloody tragedy drew through the colony, exciting the utmost horror and alarm. The Moravian Indians at other settlements required immediately to Philadelphia for protection. The barracks at Camptown were first assigned as their quarters, by order of the Governor. But the "Rhinsburg boys" stationed there refused to receive them, and in the piercing cold of the month of December, they were removed to Province Island, below the city. The insurgents threatened to march down to destroy them, and the Assembly, intending to oppose their barbarous designs, passed an act authorizing the incurring of any expenses necessary to prevent them. The Indians, one hundred and forty in number, affrighted at the prospect, petitioned the Legislature to remove them to England.—This being impracticable, they asked to be placed under the protection of Sir William Johnson, of New York. Governor Morris furnished them with a pass for this purpose, and a pass was also furnished through New Jersey, by Governor William Franklin. They went under the escort of a company of seventy Highlanders, and proceeded as far as Amboy. But Governor Colden of New York and his council were unwilling to receive them, and General Gage, commander of the English forces in America, ordered them back to Philadelphia, escorted by two companies of Royal Americans, and they were placed at the barracks.

The news of this return aroused the ire of the "Paxtang Boys," and they determined to march to Philadelphia and slaughter them.

Strange as it may seem, this was all done in the name of Christianity. The leaders and incendiaries were all professors, they endeavored to justify their acts by the authority of the Bible; assumed to be instruments of God for the punishment of the heathen, and claimed that the earth was given as an inheritance for the saints.

They numbered some hundreds, and as they approached the city the alarm was very great. Six companies of infantry, one of artillery, under the command of Capt. Lesley, and two of horse, were formed to oppose them. The barracks, in the Northern Liberties, where the Indians were lodged, were fortified; field works were thrown up, and eight pieces of cannon mounted. The Assembly passed a bill extending the provisions of the act to the province; and all the avenues to the city were guarded. The "Paxtang Boys" marched to the ferries on the Schuylkill, where they found forces prepared to receive them; they then crossed the Schuylkill, further up, and hailed at Germantown. Benjamin Franklin and other citizens, went out to them, and finding the force opposed to them much stronger than they anticipated, they affected to negotiate, and finally agreed to withdraw, leaving only Matthew Smith and James Gibson, two of their leaders, to lay their grievances before the Government.

The latter, in pursuance of their instructions, memorialized the Assembly on behalf of themselves and inhabitants of Lancaster, York, Cumberland, Berks, and Northampton counties, in which they endeavored to excuse and justify their enormities. The Assembly, notwithstanding, passed an act directing that those accused of the murder of the Indians should be tried in Philadelphia, or any adjoining county, and refused to countenance the barbarous of the insurgents, although a strong party endeavored to defend their excesses. Their memorial had fifteen hundred signatures, but produced no effect; the county of Bucks protested against it by their grand jury; but no further steps were taken. The insurgents were too wealthy and powerful ever to be brought to justice. No one was arrested or tried, and the barbarous murder of the Christian Indians went unavenged, a fact which will ever remain a damning spot upon the colonial history of Pennsylvania.—*Philadelphia Dispatch.*

OUR WESTERN LAKES.

A correspondent of the Cambridge (Mass.) Chronicle, writing from the Sault Ste. Marie, makes the following calculations, which may be of interest:

July 5.—I have been making some calculations and comparisons in relation to the extent of these lakes, some of which I will give you and let that tape rest.

Into Lake Ontario you can plunge, (i. e. if you can lift her) the whole of our good old Massachusetts, and still leave bathing room; Lake Erie, when drained, will make three States equal to Vermont, Connecticut and Rhode Island. Lake Huron with its bays comprises almost exactly in size with Maine; Lake Michigan would contain Vermont, New Hampshire and Connecticut; while neither of the large States of New York, Pennsylvania or Ohio, is large enough to make a cover to Lake Superior! Or take these counties which have so occupied the thoughts of mankind. The present Kingdom of Greece would be lost in Lake Erie, Italy in Lake Huron, and five-sixths of all England in Superior. Or we may take Scotland or Sicily as known, some of whose islands are larger than many a German or Italian Principality. And still the thought is constantly recurring these are mere bodies of fresh water, a part of our Northern boundary.

SACRED TRUST BETWEEN OR PARADISE.—It is usual for the Wendemiaut farmers to sell such a sheep for their own use at Christmas; so when the butchers inquire if they want any meat against Christmas, a common reply is, "Nay, I think o'taters some more!" A butcher called on a farmer of his acquaintance in the usual manner, saying, "Will ye want a bit of meat, or pe'll sell yoursen' this Christmas?" "I kan not," replied the farmer, "whether lee will BEEST OR YAE A SHEP AT MY FATHER!"

ANOTHER CHARGED FOR THE MISSIONS.—Out West, there has long been known, on a certain side hill, a large hole, which is not an uncommon thing in that section of the country. The hole is said to have recently caved off and left the hole *standing out about ten feet!*

United States SATURDAY POST.

HENRY PETERSON, EDITOR.

Philadelphia:

SATURDAY, SEPTEMBER 30, 1848.

REMOVAL.

Our subscribers will please take notice that we have removed the office of the Post, from No. 98 Chesnut Street, to No. 66 South Third Street, first house below the Girard Bank. Our office is in the *second* story, above that of the North American.

TO POSTMASTERS.

We trust our old friends, the Postmasters, will count themselves and get up large clubs for the monthly Post; or if they do not feel inclined to take advantage of our liberal offers themselves, that they will show our Prospectus to some other influential and responsible person who will be willing to do so. We think there need be no great difficulty in getting subscribers to the enlarged paper, as those who will take the trouble to compare it with the other weekly papers, cannot fail to perceive that it outshines all competition. Let it be remembered, also, that the *postage is just the same on a first class paper, as on the meanest and poorest of the small reprints.*

NOTICE.

Subscribers wishing their paper changed, will please give the name of the Post Office to be changed *from*, as well as the Post Office they wish it hereafter sent to.

All persons addressing letters to us should be careful to give the name of the State as well as of the town in which they live.

Post Masters or others sending for a club, would confer a favor by having them sent to one address when they can do so conveniently. in

TO CORRESPONDENTS.

ANON, Wash.—We are sorry to decline *angel visits*, but in this case, we shall be compelled to do so. The poet does not say that angel's visits are "few and far between"—this is a common error. If our friend will consult the book, he will find the poet uses a better word. But we do not decline the poem on this account, but because it does not, as a whole, come up to our standard.

DACTOMA, "The Evening Star," and "To A." are respectfully declined. Not quite up to the height of the Post.

AN APOLOGY.

We owe an apology to our subscribers this week. We have been procuring from Hoe & Co., New York, one of their admirably constructed, double-cylinder presses; and in the change from the old press to the new, with other changes with which it is not needful to trouble our readers, considerable delay has occurred in getting our edition to press. We are afraid also that some of our papers will not be printed as well as they ought to be. Next week, however, we hope to have things in first-rate order. When we get our new press fairly under way, we have reason to believe it will turn out as good work as any in the country.

THINGS ABROAD.

In addition to our regular report of foreign news in another column, we may state that John O'Connell has addressed a long letter to the people of Ireland, earnestly urging them to resort to organization. This appeal, it is stated, is not likely to be responded to. Considering the probable security of food, and the late unsuccessful attempt at insurrection, we should think poor Ireland had no elements of strength for another agitation.

Mr. O Gorman and Dr. Reynolds, of Liverpool, are believed to have escaped to America.

The Crown Solicitor, it is said, finds some difficulty in implicating Mr. Meagher in the Ballingarry skirmish—and his only course is to have him tried for "overt acts of treason connected with that affair."

Lord John Russell, having investigated the condition of Ireland, as it appears in the drawing-rooms of the higher circles of Dublin, is fully satisfied that all is comfortable and right, and is about to join his royal mistress in Scotland.

The English Army in Ireland is concentrating in the South, where the trials are to be held. All is still quiet, and it is expected that what starving is to be done, will be done by the peasantry in peace. If things continue in Ireland as they are much longer, the yearly starvation of some thousands will be expected as a matter of course. In view of this fact, one would not think that England was "the bulwark of Christendom," as she believes herself to be.

In France all is tolerably quiet. The Assembly is proceeding with its discussion of the Constitution. We see that a petition has been presented to the National Assembly, praying that body to raise funds to enable 20,000 families, now unemployed in Paris, to establish themselves in the colony of Algeria. 20,000 families unemployed! Can our readers imagine what untold misery and suffering that word "unemployed" embodies in itself as in a germ? No wise man wonders at robbery, incendiarismm, or murder, where there are 20,000 families "unemployed." Not only "an idle man's brain," but an idle man's stomach, is "the devil's workshop."

A Neapolitan fleet, with a large army on board, left Naples on the 20th ult., to reduce the Sicilians to obedience—the English fleet having instructions to offer no opposition. It was believed the Sicilians would defend themselves to the last extremity. God prosper them in the defence of their newly acquired freedom! If, however, it be given in the tyrant to conquer, we take courage in the thought that it is but for a little while:

"For Freedom's battle once begun,
Bequeathed from bleeding sire to son,
Though baffled oft, is ever won."

THE GOLD REGION.

A letter recently published in the Washington Union, from Mr. Lawrie, the U. S. Naval Agent at Monterey, addressed to Commodore Jones, confirms the accounts heretofore received of the existence of Gold on the borders of various rivers in California, and the mad excitement that prevails at all that region to share in the spoils. Whalers may counsel their companions, the two navy-agents suspended their issues, and Monterey is daily losing numbers of its inhabitants—soldiers, printers, travellers, all classes, hurrying to the branches of the American and Feather rivers. Mr. Larkin says that three-fourths of the houses in the town of San Francisco also are closed.

The amount of gold in the gold region, is described in the most extravagant terms. Mr. Larkin says:—

"Many who have seen the 'Placers,' think it will last thirty or forty years. I should think that it would afford work two or three years to many thousands of people, and may for very many years, as I cannot calculate the extent of country having gold.

"I have this week been at Monterey, a Californian, who shows four hundred dollars of gold from the labor of one week: much of it was the size of wheat. I myself weighed one piece from his bag, and found the weight to exceed one oz. He, like many others, only went up to the gold regions to see the place, borrowed tools, worked a few days and came home to show his labor, and take up southern and common and provisions. I do not think I am exaggerating in estimating the amount of gold obtained on the rivers I have mentioned at ten thousand dollars a day for the last few days. There is every reason to believe the amount will at this season (unless the washers are driven from their work by sickness) be any less. In this case be additions of strangers now joining the first men, and the emigrants from the Atlantic States on shall have in October and December, will convince all the value of California gold that will be reached out to an unheard-of value."

The plan pursued by the gold hunters is mainly this: First, with a pick and shovel, to clear off two feet of the top earth, then put in a tin pan or wooden bowl a shovel of dirt, go into running water, with the hand stir up the dirt and throw out the stones, and what remains is generally a quantity of black sand, containing one to five dollars. This can be done once or twice a day.

Of course this rude plan of working will soon give way to more skilful modes—companies of men are already formed, and machines constructed to filter the earth in a more rapid and effective manner.

This gold region is a portion of the government lands. Whatever gold is upon it, therefore, belongs to the Government of the United States, in trust for the whole people. If, therefore, these accounts of an almost inexhaustible quantity of gold being discovered be true—or even if but a moderate quantity be really found,—it becomes the duty of the government to interfere to secure to the trust owners of the country. The United States have paid many millions of dollars for California, and if the heavy sums offered to raise the necessary amount for the prosecution of the war, and the after losses to Mexico, can now be paid off in whole or in part, by the discovery of precious metals in any portion of the newly acquired territory, it will be a great blessing to the industry of the country, which will ultimately have to foot the bill. Acres of virgin gold, in this way, might prove an advantage to the whole country, by lightening the necessarily heavy burden of taxation. We trust, therefore, that if there be any truth in these statements of Mr. Larkin and others, the Executive will lose no time in preserving the property of the nation from spoliation.

THE LAST DODGE.

One of the candidates for Governor in Ohio, was recently interrogated by a political opponent, with a view to learn his preferences for the Presidency. The letter addressed to him stated that the people in his vicinity were exceedingly desirous to know *how he should vote this Fall.* The candidate promptly replied, that he expected to vote as usual—*by ballot.*

DRAWING THE LONG BOW.

The editor of the Knickerbocker, on the authority of Gen. Verplanck and others, accuses Mr. Charles Lanman, author of "Summers in the Wilderness," of having made some statements in that volume, which are not quite reliable. These gentlemen have recently returned from the North-West, where they went under an appointment from the government, to form a treaty with a remote tribe of Indians.

A correspondent of "The Tribune," who dates at Fond-du-lac, a trading post near Lake Superior, makes a similar charge. He says, among many other things:

"According to the 'Summer in the Wilderness,' the author traveled, in his canoe, not only to Sandy Lake, but to Mille Lac, to Leech Lake and Elk Lake, at the sources of the Mississippi. He dates letters there, and has an interesting hunt, and other incidents. Mr. Morrison, with whom he travelled, says he was no nearer Mille Lac than a day's travel, and no nearer Elk Lake and Leech Lake than between two and three hundred miles. Lanman says he journeyed in his canoe *several hundred miles* of Lake Superior, and at Saint Mary's gave away his canoe to some traveller. Morrison says he travelled all the way from Grand Portage to La Pointe as a free passenger in his (M's) canoe, and at La Pointe Lanman took the steamboat direct for Sault Ste. Marie. Lanman says, that while sleeping with Morrison in the tent, a wolf stole away the pork; Morrison says, that some *few years* before, a dog stole his pork in that manner, and he mentioned the fact to Lanman. At the Rapids of St. Louis there is in the book a dreadful scene, and a narrow escape from death, in which the author had a part. This, too, is an incident that happened to Morrison some years before, and not to Lanman! By the book an mountain on the north shore of Lake Superior is are three thousand feet high; but according to Captain Bayfield's Surveys, they are twelve hundred. Finally, add to great numbers other incidents, equally glaring, of the deliberate and habitual laxity of Lanman's descriptions, to say nothing of the improper use of quotation marks."

We are under the impression, from several things that have come to our knowledge, that there are many authors at the present day, who scruple not to put in their books of travels, as *facts*, things which have no other foundation than their own excursive faculties. They seem to think statement allowable, however false, if it will tend to heighten the interest of their works, and is of a character not to be readily detected as a mere fabrication. Dumas, the celebrated French author, is so given to this practice, that no one of common information in literary matters, pretends to believe what he says, simply because *he* says it. Many of his travels, it is averred, are written without stirring from Paris.

It needs no argument to prove that this practice is at least reprehensible, and that it should be exposed by the press whenever an author is detected in it. The man who needs to have on this account, but because it does not, as a whole, come up to our standard.

THE MISSISSIPPI.

At the recent meeting of the Scientific Convention in this city, a rather extraordinary paper was read from Professor Dickeson and Andrew Brown, of Mississippi, upon the amount of water and rediment in the Mississippi River. We quote the substance of the Report from a contemporary:

The observations upon which the report was based were made through a course of eighteen years, and more particularly during the last two years in anticipation of the present report. The report alluded to the vast quantity of rain water constantly falling in the valley of the Mississippi, and the fact that that great river was the only channel for its discharge. The report showed that the quantity of rain falling was 112 times the quantity discharged by the river. This was but the work of God to excite, one by course of the river and the other by evaporation.

Thus the report arrived at a fact of the greatest importance to the planters of Louisiana and Mississippi, for the more exhalations are promoted, the less liable will the lower bottom lands of these States be to periodical inundations. The best way to promote exhalations was by clearing the forest lands, and thus exposing the earth to the rays of the sun. It has been *found by the progress of population and civilization in that region, that there is no more by twenty or thirty feet per cent, as much as was supposed when the river as there was twenty-five years ago.* At that time there were annual inundations which do not occur now.

In regard to the sediments of the river, the result of 481 experiments with a tin tube charged with water taken from different points, and discharged in this tube at different times was a column of 1,296 feet, by which there was deposited a column of sediment of 464 feet, or 36 per cent. The sediment was submitted in three glass tubes. The committee seemed to think it might still further travel silty, and consequently not less than a mile. From these data the committee arrive at the conclusion that the proportion of sediment to the volume of water is as 1 to 720.

It has already been ascertained that the quantity of water annually discharged by the Mississippi River is 1,000,000,000,000 cubic feet, therefore there must be deposited 28,188,955,562 1-6 cubic feet of solid matter.

Such are the "facts" of the report, and we must confess that they are not only on a very large scale, but also that they seem rather nicely, or fishy,—which considering that such a vast volume of water is under consideration, is not much to be wondered at.

We will, however, content ourselves at present, with putting one question to the authors of the Report. If the "progress of population and civilization" in the Mississippi valley, has diminished the amount of water in the Mississippi River, "twenty or twenty-five per cent." in twenty-five years, how many years will it be before that river is whole we think we may congratulate the country in general, upon the prospect of our possessing, before long, a real aristocratic edifice, "all of the olden time." And as a castle would lose half its romance if inhabited by a mere *Miller*, we would respectfully suggest that the Hero of Lake Erie, forth honored with the title of My Lord, or as the Queen might reverently pronounce it, My *Lord* Forrest.

THE ENGLISH NOBILITY.

The Duke of Buckingham lately sold off—or is perhaps only about to sell off—a large portion of his hereditary property to pay his debts. The London Times is quite indignant at the noble Duke's course and conduct. It says:

The public feeling of this country respects the House of Lords, but not a single aristocratic assemblage. It is apt to contrast and to censure noble manners, and to contrast and to censure with more seem never to be forgotten. So sudden was the eruption, that no steps could be taken by the inhabitants of the villages in the neighborhood to escape the impending danger. Shortly after the flame burst forth there came down the sides of the mountain a stream of lava mixed with red hot stones, sand and mud, and carrying every thing it met with in its course to the river. Huge trees, rocks, villages, animals, all were swept before it, and when this stuff came reached the river, it caused wide-spread ruin.

"A portion of the stream from the crater fell into the river Kanto, and the water in the river instantly rose fifteen to twenty feet. Down this river came trees of large size, as also dead buffaloes, both wild and tame, tigers, and the dead bodies of the villagers; before this stream of lava the fish in the river disappeared, and from the report alluded to the vast quantity of rain water constantly falling in the valley of the Mississippi, and the fact that that great river was the only channel for its discharge. The report showed that the quantity of rain falling was 112 times the quantity discharged by the river. This was but the work of God to excite, one by course of the river and the other by evaporation.

Thus the report arrived at a fact of the greatest importance to the planters of Louisiana and Mississippi, for the more exhalations are promoted, the less liable will the lower bottom lands of these States be to periodical inundations. And as a castle would lose half its romance if inhabited by a mere *Miller*, we would respectfully suggest that the Hero of Lake Erie, forth honored with the title of My Lord, or as the Queen might reverently pronounce it, My *Lord* Forrest.

ERUPTION IN JAVA.

On the night of the 16th of May last, there was an awful volcanic eruption in the island of Java. A correspondent of the Boston Journal says:

"The first symptoms were a tremulous motion of the earth in the vicinity of the mountain, then several reports like distant cannonading, and then the flames burst forth, followed by streams of burning lava, some of which in eight days were seen never to be forgotten. So sudden was the eruption, that no steps could be taken by the inhabitants of the villages in the neighborhood to escape the impending danger. Shortly after the flame burst forth there came down the sides of the mountain a stream of lava mixed with red hot stones, sand and mud, and carrying every thing it met with in its course to the river. Huge trees, rocks, villages, animals, all were swept before it, and when this stuff came reached the river, it caused wide-spread ruin.

"A portion of the stream from the crater fell into the river Kanto, and the water in the river instantly rose fifteen to twenty feet. Down this river came trees of large size, as also dead buffaloes, both wild and tame, tigers, and the dead bodies of the villagers; before this stream of lava the fish in the river were driven; and boat loads

A SWEET POEM.

We call the attention of our readers to the beautiful poem with which we lead off our paper this week, from the pen of the poetess-poet, T. S. Reed. We think they will unite with us in saying that it contains passages of exceeding merit. The following, for instance, is beautiful:

Upon the beggar's hand the satin brown
Fell faint and dim,
As when upon some margin of the sea
The foam touches the briny air,
And hence the far waves symphony,
But hence it unstrews,
The mouth from the lofty aisle,
And all the splendor of the sacred pile,—
The pressure hung at intervals
Safe windows, gloaming from the walls
Close glimpses of the deep opens,
From that blessed home when over Bethlehem shone
The shepherd's star, until that darker time
When groaned the earth aloud with agony sublime:—
All were unheeded
And came, but as his breath
Or if there came a thought that thought unneeded
Even in its birth met death.

The following also is fine:

For there was one among that few
Who from mere worldly pomp
And in the beggar's hands the silver drop,
And shed the benediction of the earth.
Such souls as here might well renew
A heart so in her light, and might begets
The shadow of a mourner's hue —
Such souls are like the blessed dew,
By evening shed upon a wayside flower,
Sinking as the heart sinks when a miraculous power.
The earliest primrose of the spring
Which at the brookside, suddenly in sight,
Gleams like a water spirit—
And the first herald bird on southern wing
Chanting his wild enthusiastic rhyme
About the summer time—
Wake in the soul a mingled, deep delight!
But there are eyes whose first sweet look
Outshines the primrose by the brook;
And there are lips whose simplest words
Outrival even the spring-time birds.

By the way, we would take this opportunity to inform our readers and the public at large, that a new volume of Mr. Reed's poetry will shortly be published by G. S. Appleton, Chesnut street, Philada. It will be called "Lays and Ballads." The author of it will be entirely distinct from that of the volume published some year ago. We recommend it to the patronage of our readers.

BREADSTUFFS.

Private letters received by the merchants of New York, do not agree with the reports in the English papers, as to the extent of the Irish crop. They say that, instead of a decline, there had been an advance of 3s. on corn, and 4s. on Wheat, on Friday, the day previous to the sailing of the steamer. The advance was consequent upon the demand for Ireland and the unfavorable reports in regard to potatoes. After the letters were distributed at New York on Monday, the Breadstuff Market, which had been depressed, revived, and Corn advanced four cents per bushel, and Flour continued firm at Saturday's prices. The appearance of things abroad seems rather to favor the presumption that there will be a moderate demand for breadstuffs from this country, at reasonable prices. The N. Y. correspondent of the North American, however, under date of the 20th, says:

The market has been rather active to-day for Flour, but the quotations show no improvement. Prices are the same as on Saturday. The receipts have been 12,000 to 14,000 bbls. of which about 10,000 were for export at $5.56@5.62½ for mixed Ohio, and $5.62½ for extra Michigan and Ohio, to $5.62½ for Genesee. Sales 500 bbls fine Flour at $5. There is some enquiry for future delivery, but I hear of no transactions.

The sensitive Southern sympathizers with Western, and in a little easier. Sales 1,500 to 1,500 bbls Brandywine and Georgetown at $5.62½@5.75.

Meal is quiet with small sales Jersey at $3.25.

Grain—Wheat is quiet and prices are nominal.

For Wheat there is more shipping inquiry, and about 10,000 bushels Genesee sold at 128 cts. which is lower. Corn is firm and round yellow especially. Sales 6,000 bushels round yellow at 70 cts. and high mixed; 67a70 for flat yellow and 74a75 for round yellow. Rye is 65 cts. with sales 6,000 or 7,000 bushels. Oats are a little better with sales 6,000 or 9,000 bushels at 34a36c. Sales 50 bags Black-eyed Peas at $1.25.

PUFFING.

Some of the tallest puffing—not to call it by the truer epithet of lying—to be found now-a-days, is to be seen in the prospectuses of some of our newspaper contemporaries. We observe that the publisher of a sheet of medium size, makes no scruple to denominate his paper the *largest* in the country. Others give authoritatively false accounts of the number of their subscribers—sometimes leaving a long hole to creep out of, but oftener going the "whole hog," the downright lie. Our paper now before us, says that within the last seven years, it has been patronized by at least ten million subscribers!! The publisher also describes it as the *cheapest, largest and best* of the Philadelphia weeklies—when it is by no means the cheapest, not even as large as the Post and Sunday Mercury, and that he is a man of truly honest intentions and purposes, who really desires, like a true patriot, the highest welfare of his people, and has been willing to make every personal sacrifice to promote the real amelioration of the subjects of the Papal States, and the votaries of the Papal Church.

The Pope was robed in a white flannel dress or gown, which fell without a girdle from his shoulders to the floor. His tonsure was covered as usual by a small white cap. He was without gloves, holding his staff but in one hand—of the precious one of which his sons gave ample evidence.

The following sounds rather *curious* to the Protestant reader:

On visiting the Pope it is generally customary, especially by "the faithful," to carry a quantity of the emblems of the Catholic religion to be blessed. In our case, not being of the "true faith," we took but few articles of our own, although we were loaded down with chaplets, crosses, medals, &c., belonging to others. In the antechamber there were arranged in separate parcels, on a silver salver, and then borne by a servant to his Holiness, who blessed each lot successively.

CAPITAL.

A gentleman employed in the New York Custom House, recently presided at a meeting at which some resolutions were passed, principally insisting that the Collector should remove certain gentlemen reported not to be sound in the faith, from their situations. The same gentleman, also, it is understood, was one of a committee to wait upon the Collector with the resolutions of the meeting on this subject. Shortly afterwards the busy gentleman in question received the following laconic notice from Collector Lawrence:

NEW YORK, 18th Sept., 1848.

SIR:—Your services as a member of the committee appointed you have held from me, will not be required after this date. Your friend,

W. LAWRENCE, Col.

To Mr. ———, Custom House.

We confess we like this. If there is one thing in politics we dislike more than another, it is removal from office for opinion's sake, so far as the subordinate officers of the government are concerned. What does it matter to us whether a Custom House or Post Office clerk be a Democrat, Whig, Free Soiler or anything else, so long as he does his duty, and is an honest man? The only questions put in such cases, should be the famous ones of Jefferson's, "Is he honest, is he capable?" If he be honest and capable, he should be left to the quiet duty of clerks, &c., employed by government, would prevent most idal one. A Presidential election is exciting enough, without adding to it the additional stimulus of "the spoils." So long as a clerk does his duty, he should be retained; but his salary should not be higher than what is given by employers in general to persons filling situations demanding equal ability. In one word, a government clerk should be paid no better than any other clerk. It is the mere gossiping the mere, there would be half the desire there now is to get employment under the government. And we should hear but little of "party proscription," "the spoils," or "rotation in office"—phrases not very honorable to the character of a republican people.

A NEW STOVE.

A precious stove has been invented by a Dane. Easier. It occupies but a small space—is made of wood or coal, and it is said, will burn twenty days, with all the appurtenances. By a slight change it becomes a common cooking range, to burn either wood or coal. Another change, and it becomes a grain, concealed within the stove, and a place filled with bright coals, dispensing comfort and cheerfulness to the apartment. Another change, and all the comforts of the agreeable open fireplace are secured, yet omitting even the conventional mantel-piece. In short, it assumes so many different appearances as a harlequin, and is very simple, neat and ornamental.

We have tried a good many kinds of stoves, and the result of our experience is that: That the simplest are the best—that stoves which will hold a fair quantity of coal, are just as economical as those which hold only a handful—and that for setting smoke, the old fashioned, barrel stoves, with cap cylinders, will last longer and give more satisfaction than all the air-tights, patent, and other new-fangled contrivances that were invented. Such is the conclusion we have come to.

NUISANCES.

We perceive that the owner of a soap and candle manufactory in the southern part of the city, is being prosecuted for maintaining a nuisance. That is right. As Shakspeare says,

"The offence is rank, it smells to Heaven."

We hope the Court will do its duty, and decide that no man has a right thus to deprecate the value of real estate for squares around him. Although odorous trades should be banished by law from towns and cities. By the way, there is another of those nuisances not far from the corner of Callowhill Street and the Bridge Road. Why do not the owners of property get together, and take the necessary measures to have it also removed. It injures the value of property in that vicinity greatly. It is time all such nuisances were boldly made hold of, and thrust forth

"To tenant their *incense* on the *country air.*"

THE POPE.

A correspondent of the Boston Atlas, in an account of a recent interview with the Pope, says that the Pope stated, in answer to an enquiry of the universal sympathy felt in the United States with his reforms, "that he was not unmindful of the state of things in America, that the universal approval of his course by *a great and free people*, has the Americans, seemed to speak to him *like a voice divine*, and had thus, more than almost any thing else, encouraged his heart and strengthened his hands in his arduous undertaking."

The following description of the personal appearance and manner of a man who has given such an impetus to the cause of Italian liberty, will be interesting to our readers:

Pius IX. is of low stature, not being above five feet and four or five inches. He is rather stout, although not corpulent. His age is 52 or 53. From his appearance, one would judge that he has a good, even a robust constitution. The expression of his face is benignity itself; it is kindness and urbanity written in characters not to be misunderstood, so that all who come into his presence experience a freedom from restraint wholly unlooked for, which places them quite at their ease, and makes them forget that they stand before one of the highest of the earth. In his presence one feels only that he is communing with a noble and good man. All other distinctions for the time are lost. Royalty is forgotten. Crowns, sceptres, mitres, and princely robes are no longer thought of. All these extraneous objects sink into insignificance when compared with the true grandeur of an honest man. My impression of Pius IX. is, that he possesses talents of a high order, that he is honest, and that he is a man of truly honest intentions and purposes, who really desires, like a true patriot, the highest welfare of his people, and has been willing to make every personal sacrifice to promote the real amelioration of the subjects of the Papal States, and the votaries of the Papal Church.

The Pope was robed in a white flannel dress or gown, which fell without a girdle from his shoulders to the floor. His tonsure was covered as usual by a small white cap. He was without gloves, holding his staff but in one hand—of the precious one of which his sons gave ample evidence.

The following sounds rather *curious* to the Protestant reader:

On visiting the Pope it is generally customary, especially by "the faithful," to carry a quantity of the emblems of the Catholic religion to be blessed. In our case, not being of the "true faith," we took but few articles of our own, although we were loaded down with chaplets, crosses, medals, &c., belonging to others. In the antechamber there were arranged in separate parcels, on a silver salver, and then borne by a servant to his Holiness, who blessed each lot successively.

Our Correspondents

LETTER FROM GRACE GREENWOOD.

New Brighton, Pa., Sept. 12th, 1848.

GENTLEMAN—The heavenly weather which we are having about this time effects most unfavorably my literary life, indisposing me for the necessary confinement and application. A soft languor, a sweet pleasant indolence pervades all nature—Earth seems repenting after the labors of the summer, with the golden sunshine asleep upon her breast. The sun himself no longer exerting himself to shine, his most passionate days gone by, seems trusting himself to a season of *dolce far niente*, and seems *con dignitoso*. Then if the sunshiner is becoming subdued, why should my poetical enthusiasm be expected to be perpetually on the glow—when the farmer has laid by the sickle, why should my nervelessness hand still grasp the pen—if nature is indulging in a do-nothing mood—why should I not hold my hands, in a delicious fit of laziness, although as the old epitaph hath it—

"Naively quick and spry,
As most young people be."

I sometimes think that I would incontinently cut pen, ink and paper, turn a *dead ear* to the seductive voices of the Nine—show my face no more in weeklies, monthlies and annuals—in short, "elope into retirement," would the dear public leave it to forfeitmate, depending hold upon me—were it not for posterity and pin-money. Smile not, gentle sirs, at my claims to philanthropy—say

United States SATURDAY POST.

Philadelphia:

SATURDAY, SEPTEMBER 30, 1848.

VIEWS A-FOOT.

J. Bayard Taylor is about issuing a second and revised edition of his pedestrian excursion in Europe. T. B. Read has painted a portrait of the author, in his travelling costume, which has been engraved for the work. Those of our readers who have not read Mr. Taylor's book, will find it a good investment to purchase a copy of this second edition when it appears. Views A-Foot is a delightful volume, and shows what youth, energy and fine talents can accomplish. The following extract from the work, in relation to the cost of travelling in Europe, will prove interesting to many. Mr. Taylor, it will be remembered, speaks from the card:

The cheapest country for travelling, so far as my experience extended, is Southern Germany, where one can travel comfortably on 25 cents a day. Italy and the south of France come next in order, and are but little more expensive; then follow Switzerland and Northern Germany, and lastly Great Britain. The cheapest city, and one of the pleasantest in the world, is Florence, where we breakfasted on five cents, dined sumptuously on twelve, and went to a good opera for ten. A man would find no difficulty in spending a year there for about $250. This fact may be of some importance to those whose health requires such a stay, yet are kept back from attempting the voyage through fear of the expense. Counting the passage to Leghorn at fifty or sixty dollars, it will be seen how little is necessary for a year's enjoyment of the sweet atmosphere of Italy. In addition to these particulars, the following connected estimate will better show the minimum expense of a two years pilgrimage:

Voyage to Liverpool in the second cabin,	$24 00
Three weeks' travel in Ireland and Scotland,	25 00
A week in London, at three shillings a day,	4 50
From London to Rotterdam,	15 00
A month at Heidelberg and trip to Frankfort,	20 00
Seven months on Frankfort, at $20 per month,	70 00
Fuel, passports, excursions and other expenses,	30 00
Tour through Cassel, the Harte, Saxony, Austria, Bavaria, &c.	40 00
A month in Frankfort,	10 00
From Frankfort through Switzerland, and over the Alps to Milan,	15 00
From Milan to Genoa,	10
Expenses from Genoa to Florence,	14 00
Four months in Florence,	50 00
Eight days' journey from Florence to Rome,	
two weeks in Rome, voyage to Marseilles, and journey to Paris,	40 00
Five weeks in France,	15 00
From Paris to London,	8 00
Five weeks in London, at three shillings a day,	31 00
Passage home,	60 00
	$472 10

The cost for places of amusement, guides' fees, and other small expenses, not included in this list, would increase the sum total to $500, for which the tour may be made. Now, having, I hope, established this to the reader's satisfaction, I respectfully take leave of him.

ASIATIC CHOLERA.

A physician in St. Louis, Missouri, publishes a full description of a case in that city, which he regards as one of Asiatic Cholera. The patient was an Englishman by birth, and said he had the Cholera once in London, and thought this was the same disease. He died in forty-eight hours.

The doctor adds that the epidemic should be met at the very earliest moment possible after the appearance of the first symptoms. He therefore recommends persons experiencing the first symptoms to resort at once to the following remedy, which, he says, every one can prepare, and use with safety. Take gum camphor, gum opium, African cayenne, and oil of cloves, each one ounce, and Hoffman's anodyne liquor, one pint. Shake up the ingredients frequently in a bottle, and in ten to twenty days, filter through paper. Dose for adults, 30 to 60 drops every second, third or fourth hour, until the stomach and bowels are relieved. It should be taken in a wine glass full of water. This, the doctor said extensively cured the prevalence of the Cholera in 1833, and he found it an excellent preventive of the disease.

BOARD OF HEALTH.—The number of deaths during the last week in this city was 153—adults 56, and children 79.

New Publications.

THE UNION MAGAZINE. The October number of the Union contains an engraving called "The Bitter Morning," which represents a rather ill-fatured gentleman, sitting up in bed with the bed clothes heaped around him, regarding the snow outside the window, and other signs of the hard times, with a troubled expression of countenance. There is also a pretty engraving of the "Hotel de Ville," which so many Mrs. Partingtons have been surprised to find was no hotel at all, but simply a City Hall, and a Fashion Plate. The contributors to this number are Mrs. M. Sigourney, Miss Leslie, Miss Lynch, J. Bayard Taylor, &c. &c. The editor, Mrs. Kirkland, was in Europe, but a letter giving her "London Experiences," from which we extract the following interesting passages——

THE QUEEN.

She seemed to us much plainer in every respect than any picture of her we had seen. Her complexion is far from clear, her figure diminutive, her dress devoid of taste. Doubtless, the circumstance of her being so unexpectedly detained had a good deal from the elegance of her appearance. She was dressed entirely in black, without even the relief of a white collar, or handkerchief, a style particularly ill-suited to her figure and complexion. The Prince looks like a substantial German Baron, not ill-bred, but quite behind the nations one gets of him from his portrait. If the Queen had married him for the strength of the impression made by one of those flattering semblances, she must have been sadly disappointed; but she was happy? poor soul! from any insight of so idle a mistake, by an early acquaintance with the Prince, her cousin, who studied with her under the same masters for two or three years. They are said to be truly happy in their domestic relations; and the English have a deep respect for the private character of their monarch. They consider her a model wife and mother. She is extremely systematic, and makes a point of superintending personally all the arrangements for the comfort and improvement of her children, reading all the books which are provided for their use, and expounding herself with the characters of those who have charge of them. We were amused to hear that the Queen of England does not like literary people; that she excludes them, as far as possible, from the court; and, in fact, considers having introduced a book as equivalent to loss of caste. A person who had by dint of great science and ingenuity perfected a plan by means of which the public interest was essentially benefitted, embedded the result of his studies in a book, highly esteemed by the critics and the public. It was proposed by a certain lady at court to present this gentleman, on the strength of this merit, but the Queen absolutely declined receiving him, because of his literary character. Some one suggested that he had served with honor in the army, upon which ground her majesty consented to receive him. But the gentleman very properly declined appearing at court on these terms; so that her majesty was after all, the only person presented in the affair. Somebody says, there is hardly a magistrate that does not commit himself twice as often as he commits any one else. But the Queen is only pursuing her legitimacy for those who ever heard of one at her family as a patron, or even an admirer of literature!

ENGLISH BEAUTY.

With a strong prepossession in favor of English beauty, and a notion that such an occasion as that of the drawing room would afford a fine field for the display of it, we must confess to have been disappointed in our search. Very few of the ladies we saw were more than comely; a large proportion fell behind even that. Our beautiful women there was, whom we were led to suppose to be the Marchioness of Donro, though we could not ascertain it. We were told, that that lady, daughter-in-law of the Duke of Wellington, and the Duchess of Argyll, daughter of the Duchess of Sutherland, were the only conspicuously beautiful women at court. Neither among the common people, in the streets of London, or in the country towns, did we observe the fresh complexion and bloom air which we had been taught to expect. Lovelier beauty seems to have been spoiled by fairness; and if there was real beauty, we did not see it. Pretty children one sees in abundance everywhere—and so nicely kept! It seems to us, that nobody knows so well how to care for the physique of children as the English. They feed them with the simple and nutritious food, and are astonished when they hear that our young folks share the rich, heavy, high-seasoned dishes of their parents. Oat-meal porridge is considered a suitable breakfast for infant rapality itself; and a simple dinner at one o'clock, the proper thing for children whose parents dine sumptuously at seven. Exercise is considered one of the necessaries of life; and a daily walk or ride (not drive) in the fresh air, the proper form of it. It might be superfluous to notice anything so obvious, if it were not that so many people in good circumstances, are shutting their children up, and keeping them immured in nurseries, or coupled up in school-rooms, with no thought of exercise in the open air as a daily requisite. We wish nothing so much for these benighted parents, as that they should come to England to become acquainted with the habits and principles of a well-ordered English nursery. A reform in that quarter is much needed among us, and we know of no people so well able to be our instructors, as the English, who have certainly brought the nursery system to great perfection, both as respects the comfort and advantage of parents and children.

ENGLISH CHARACTER.

The English are a rational people, most emphatically. Nothing is more apparent in small things than their strong, useful common sense. All the arrangements of daily life go on with a perfect system, which is unthought of among ourselves. It is curious to look at ourselves from this side the water. What a bustling, shifting, mercurial, impulsive, irritative, unfinished people we seem to be, compared with the steady, reasonable, stoic, self-complacent English, who, having been a thousand years busily engaged in discovering the best way of doing everything, are quite sure they have found it; and that every body who does anything in any other way must certainly be wrong! The excellence which has been the result of their patient effort, leads to their obvious self-sufficiency and prejudice; our consciousness of deficiency, and willingness to learn, drive us into servile imitation, and a disposition to think whatever is new must be an improvement upon the old. Yet the English are evidently, in spite of themselves, imbibing something of the American spirit, which we take to be the spirit of this age; let us hope that we shall settle into whatever is good and stable of the older regime. A short residence in London cannot but inspire one with great respect for the English character.

ENGLISH HOSPITALITY.

There is something very pleasing in the tone of English hospitality. It is manly and dignified, yet sufficiently solicitous to satisfy the feelings of the stranger; it is elegant, without apparent effort; abundant, yet not superfluous; considerate, intelligent, sympathetic. Hospitality is considered in England a duty of life, not an onerous burthen imposed by circumstances, and to be gotten rid of as cheaply as possible, or as an opportunity for ostentation, which is to be made the most of. It forms part of the plan of life, instead of being, as is too often the case with us, a rare thing, for which no regular provision is made. Dinners for show there may be, and doubtless are; we know there are royal dinners, and cabinet dinners, and Lord Mayor's feasts. But dinners where, although everything is handsome and good, society is the first object, are much more common. Conversation is a recognized pleasure; one object in coming together socially, is the exchange of information, and the collision of thought. And still more agreeable than these dinners, where all the guests are invited for a reason, are those ten o'clock breakfasts, from which all the *gene* of dinner is excluded, and at which one may sit in a straw bonnet, and speak to a neighbor, without introduction. This form of entertainment is almost unknown among us; but it deserves to be introduced and adopted. It affords ample scope for elegance, while it excuses all that makes a dinner-party terrible to the mistress of a family, in America, where domestic service is so imperfect. Tea, coffee, chocolate, rolls and butter, a few slices of cold meat, honey, marmalade, plovers' eggs, and, perhaps, a basket of oranges, or fruit in season;—these, as far as we can recollect, make up the mundane part of one of these quiet London breakfasts. But to give an idea of the better part, we should enumerate the company; but that would be contrary to our vow, which binds us to mention no names, even where our entertainers are as well known to the literary as to the social world. We may say, however, that at one breakfast table, where our host was indeed a host, we found a man of science, a travelled man, and a connoisseur in art, as our conversation another, well known to many an American traveller in the old world, an assemblage of guests, each of whom brought no trifling contribution to the common stock of pleasure; and all converged towards their entertainer, whose stores of memory, whose wit and humor, and thorough acquaintance with the world, make an hour spent with him something to be remembered. Such visits leave a mark in the mind; they belong to a state of high civilization, and form one of the most unmistakable marks of it. The lunch is another means of unceremonious hospitality in England, and an excellent short cut to a good understanding between parties who have never met before, and who have not time for the slow opening of acquaintance into friendship. There is the social position round a table not too large for general conversation, and the meal for one party generally interchange of thoughts; there is the pleasant variety of refreshment, which, while it gratifies various tastes, suggests no unpleasant thought of care and labor behindand. There is the very agreeable possibility of dispersing a chance guest, who may be a bore, or a pedant, rendered so necessary by the complications of dinner. Everybody agrees in thinking that a point supper is the most social, and unbending, and heart warming, of all meals; but next to that, we should incline to the English lunch and luncheon, of which we have seen such charming specimens.

LADIES' NATIONAL MAGAZINE. The October number of this magazine contains an engraving representing the meeting of Hero and Leander, as the latter emerged from the Hellespont, on one of its nightly visits to the lady of his love. The scene is the moonlight, and of course does not represent that fatal

"night of stormy water,
When love was wild, forgot to care
The young, the beautiful, the brave,
The pride of Sestos and Abydos
Perish'd beneath the wave."

Leander appears, from this engraving, to have been an exceedingly muscular young man, rather sunburned in all respects but one. We would like the engraver to produce his authority for depicting him as the possessor of, to say the least of it, a very ruddy face. Hero, too, is representable of no exertion to swim the Hellespont, though both Byron and Mr. ——— (we forget his name,) did it, as well as Leander—but we do not believe that exertion could have produced such a singular distension of the part of the leg in question. But we have occupied so much space with the engraving of this number, that we have very little room to devote to the literary contents. We may state, however, that the contributions are by Mrs. Stephens, T. S. Arthur, &c., &c.

JOHN DONNE. John has come to life again, with the old sentiment, "A good and bad qualities. The engraving of the "Juggler in Trouble," is capital—as is also the "Man with the Military Walk." There are also some good things in the literary matter. Other parts of this number we do not like so well. We do not like, in especial, the attack upon a well known lady of this city, who, however odds her opinions may be as to the rights of her sex, is one of the most beautiful specimens of true womanhood, within our acquaintance. A lady who, while she takes interest in matters beyond the circle of her home, fails not in the punctual discharge of all the duties of the mistress of a household. We can assure our "Dockey" friend, that such attacks do them no good, even with those who have no sympathy with "ultraism" at any kind.

INDIAN BIOGRAPHY, OR SKETCHES FROM MEMORY. *By Wm. Ellery Channing.* We noticed this author's first of this work some time since. It contains a number of interesting facts, anecdotes, &c. The writer is the Grimshaw, well known as the author of popular histories of the United States; England, &c. For sale by *T. B. Peterson, Philadelphia.*

THE JUDGE OR HIS FATHER: A TALE OF A YOUNG MONKEY. *By the Brothers Maghee, New York: Harper & Brothers.* Illustrated by engravings. For sale by *Lindsay & Blakiston, Philadelphia.*

We have also received this work from *Moore & Gray & Hart*, of this city, in a cheaper form.

THE THOUSAND AND ONE NIGHTS. Part 7 of Harpers' illustrated edition of this favorite for all time, has been issued. It will be concluded in twelve parts, at 25 cents each. For sale by *Lindsay & Blakiston, Philadelphia.*

General News.

FROM CALIFORNIA.

The Independence Expositor, according to the St. Louis Organ, publishes extracts from the California Star as late as April 1st. California continues perfectly quiet. Far more than a year no disorders have occurred. The native Californians are beginning to mingle with our people.

The narrow-eyed, pig-tailed Celestials, from China, are beginning to make their appearance in California, and it is said that a large immigration from China may be expected. They would no doubt prove to be a most industrious and thriving class of the population, and we do not know that there is anything to prevent their enjoying the rights of American citizens. Pagodas may be expected to arise in California by the side of churches, and a large Christian missionary field will be opened there.

Another rich silver mine has been discovered in the valley of San Jose, said in the Star to be the richest ever yet found in Mexico. If so, it must be rich indeed. The vein is three and a half feet thick, having an immense corrugated run east for three miles, the depth yet unknown. With a few hours' labor, there has been uncovered several tons of ore. It is fine ore, and requires but little expense in smelting. Viewing it throughout, location, thickness of vein and richness of the mineral, it will, it is said, prove to be a magnificent concern.

Mr. Alexander Forbes recently sailed from Monterey with a cargo of quicksilver, $20,000 in value, the product of the mines of New Almaden, near the valley of San Jose, and extracted within the short space of three months.

IMPORTANT DECISION.

A suit has been decided in Louisville, which establishes the principle that a merchant may recover damages for loss occasioned by the fall in the price of an article he has shipped, when that loss is caused by the neglect of the officers or owners of the boat to leave port at the stipulated time. In the suit referred to, five hundred barrels of flour were shipped on board the steamer Grace Darling, for New Orleans, and an advance paid of five cents per barrel for freight, stipulating to proceed to New Orleans immediately in consideration thereof. The boat, however, was detained for twenty days, and the price of flour had materially declined in the Southern market. The Judge decided in favor of the plaintiffs, and ordered that the owner or owners of the Grace Darling shall pay damages to the full amount of the loss sustained by the shippers in the detention of their produce from the market.

THE BUFFALO HUNT.

A public meeting was held at Tampico on the 6th instant, composed of the principal inhabitants and merchants, in reference to the project of the new Republic of the Sierra Madre.

Resolutions were passed strongly denunciatory of the intended scheme, and it was determined to form themselves into a strongly armed body, for the purpose of preserving order and resisting any invasion of the Mexican soil, if they should present themselves.

President Herrera has issued orders for the transportation of any of the present inhabitants of the territory ceded to the United States, to any point in the Republic at the public expense.

THE ATTEMPT TO POISON MRS. CALHOUN AT FIRST HILL.—Two slaves have been placed in jail on attempting to poison Mrs. John C. Calhoun, at her residence in South Carolina. The facts are these: Mrs. C. purchased a bottle of acid to remove stains from cloth, and took it home. She carried it into the kitchen, told the servants what it was for, and that as it was a deadly poison, they must be careful not to touch it, as it would eat through their fingers. Nancy, a kitchen servant, took charge of it, but before putting it away made another kitchen servant pour out a small vial full, and put that aside also. Mrs. Calhoun usually takes a cup of tea at bed time, and during a few days afterwards, when a little negro boy brought a cup to her, as usual, she perceived on tasting the coffee that it had an unusual flavor. This she remarked to the boy, who became frightened and wished to take it away; but this she would not allow, but ordered him immediately out for a physician. When he arrived he pronounced the coffee poisoned. The girl Nancy then confessed that she had put some of the article intended for cleaning clothes, in the coffee. A man servant, named Tom, was also implicated in the attempt to poison. Mr. Calhoun, who was in Washington, was not informed of the matter, as they did not wish to worry him; so that he knew nothing of it until after he had made his speech at Charleston, and left for home. He did not hear of it until he arrived home at Fort Hill.

THE FATE OF LAMORTINE.—The Sickleness of the French character is more truly evinced in the following item translated from the Courier Des Etats Unis, than in any thing we have seen lately. It is a melancholy comment upon the vanity and levity of the people, that they could so soon forget the last great revolution, who was for months the idol of all France, as well as America, thus made the object of ridicule, sport and spleen.

"It was decided at the last session of the Academie des Inscriptions et Belles Lettres, that Mr. Lamartine's portrait should be painted, engraved, and placed in the Egyptian Museum. According to Ramsey it would be most appropriately put in the place of the statue of Memnon, which utters harmonious sounds, but no sense."

A CHANCE FOR AN ANTIQUARY.—One of the political papers advertises for an astrologer to read the "stars" in Mr. Clay's letter, as published in the New York Express.

ALARMING.—It is said that the number of medical men in London, is greater than the butchers, and nearly as great as the bakers.

Clippings.

☞ Dr. Fuller said, "An ounce of mirth, with the same degree of grace will move God farther than a pound of sackcloth."

☞ The tall required and paid on bar iron on the Pennsylvania Canal is greater than the freight paid on it from Europe.

☞ Dr. Bristol, of Lockport, Niagara County, advertises to make artificial eyes. He says, if there has not in his line, he will take orders from persons having valuable horses deformed by loss of an eye. When the eye is made, the owner, we suppose, can supply the *feelers*.

☞ Blessed are they that do not advertise—for they shall rarely be troubled with customers.

☞ The Reverend Mr. Mullins, of the Baptist Church, while preaching in Greene County, Georgia, a few Sundays since, fell dead in the pulpit.

☞ The Irving House, a new hotel just opened on Broadway, New York, has been erected at a cost of nearly half a million of dollars, and furnished and fitted at a cost of about $75,000.

☞ The Cotton Works supply sixteen millions of gallons of water to New York daily. Half that amount only is consumed.

☞ A gentleman, in his eagerness at table to answer a call for some apple pies, owing to the quick tripping on the bottom of the dish, found his knuckles buried in the crust, when a wag, who not opposite to him, very gravely observed, whilst he held his plate—"Sir, may I trouble you for a pie, whether your hand is in?"

☞ Girls are made up of sugar and spice, young girls in particular, if they are decided vamps—but we thankful that they have health and the spirits necessary for romping. Better be a romp, than have a nervous chief and a flushed cheek.

☞ "Will you, Dick, don't you think that if the women had to do the fighting, instead of the men, they would make bloody work of it?" "No, why do you ask?" "Because I think they would, they would have such an 'engagin' way with them." Dick then thought, there also such a engaging way that there would doubtless be more prisoners than killed."

☞ In the Cathedral burying ground of Elgin, there is a gravestone bearing the date 1687, on which are the following quaint lines——

"This world is a nice full of scarcity,
And death is the merest that all men meets,
It lyfe were a thing that money could buy,
The poor could not live, and the rich would not die."

☞ The Prince de Joinville who has his father's sagacity in money matters, without his over-grasping avarice, is investing his income in United States stock. For one item, he lately bought another $50,000 of New York stock, in his own and wife's name.

☞ William Easby, of Washington, D. C., has obtained a patent for a method of cut-cutting fine coal into solid lumps. Patented, August 26th, 1848. What he claims is the formation of small particles of any variety of coal into solid lumps by pressure.

☞ A Mobile Manufacturing Company has been commenced in that city. This enterprise has been started under the free manufacturing law of the State, passed in 1846.

☞ Another Mormon War is threatened in Illinois. Two meetings have recently been held in Nauvoo, with a view of adopting measures to drive the remaining Mormons out.

☞ Mrs. Patrick Barnum, of Hartford, Ct., gave birth to four children recently—three girls and a boy! She died the following morning. One of the children also died.

☞ The Secretary of the Navy has appointed Lieut. Gillis to the command of the astronomical expedition to the Southern Hemisphere, authorized at the late session of Congress.

☞ The Lodi Democrat says that there is a little girl in his office, 13 years old, who sets 6,000 ems per day. She has worked at the business only three months.

☞ The mechanic at the present day wears a finer coat than Bluff Henry VIII. did, and the artisan of New York treads on a softer carpet than did Queen Bess.

☞ A Frenchman, master, going on horseback lately to teach at an academy for ladies, was thrown off his horse into a ditch. When he made his appearance before the mistress, in order to apologize for the dirt which besmeared his habiliments, he said, "Ah, madame, I have fallen in *the ditch*." "Oui, monsieur, I see it, you are covered with the *gravy*."

☞ The Acadia was searched previous to leaving Liverpool for Irish fugitives, but without finding any.

☞ The system of magnetic telegraph used in the United States, which is much more simple and intelligible than the electric telegraph in use in England, is about to be adopted by the Electric Telegraph Company in that country.

☞ The Dublin correspondent of the Tribune states that the wife, children, mother and sisters of the patriot Mitchel are about to come to this country. While there was a hope of Ireland's liberation, they preferred to remain at home.

☞ A snow-storm visited Western New York last Friday week. The first of the season, however, was ushered up at Franconia, N. H., where Mount Lafayette was covered with snow on the morning of the 7th inst.

☞ The Grand Lodge of the Independent Order of Odd Fellows, which has been in session in Baltimore, has adjourned. The New York difficulty or as has been called, was settled by the admission of the city delegates. It, however, caused no ill-feeling, both sets of claimants having agreed that the decision of the Grand Lodge should be final and binding on each.

☞ Mr. Mitchel, the Irish patriot, is employed at Bermuda, in the convalescent ward for sick officers, in consequence of an opinion of his physician, that he was suffering from chronic disease, and was incapable of out-door convict labor.

☞ Hawthorne, the celebrated author, says that "William H. Prescott, of Boston, is not only the greatest historian of America, but is the most eminent of the known world. It is with the most profound interest that I read his unrivalled productions, which are volumes of precious recollections, on whose leaves are indelibly stamped that rich taste of arranging facts which belong to a superior mind."

☞ A useful discovery has been made by Mr. Jas. Coppock, of Mount Holly, by which white paint, when put upon a house, will retain its appearance for a number of years, pure and fresh. The paint does not change even when kept in a damp place.

☞ A rat gnawed through the water-pipe in the Phenix Building, New York, and flooded the house. The pipe was a quarter of an inch thick, and of a composition nearly as hard as tin.

☞ The Boston Chronotype says the female compositors in the offices of several religious papers of that city are paid but twelve cents per thousand ems, about half the amount that the male compositors receive.

☞ A lunatic, who had been an inmate of the Hartford Insane Retreat, recently jumped from the stone bridge into the river, and was restored to reason by the shock.

Fashions.

FASHIONS FOR SEPTEM'R.

Abridgedfrom—Le Follet, Journal de Grand Monde.

White muslin dresses, with three or four deep flounces, scolloped at the edge, or seven or eight tucks, are much worn. These dresses are always made high, with large sleeves drawn in at the cuffs; or short sleeves with Russian leather gloves embroidered in black and trimmed with a narrow ruche of black lace, or edged with velvet, and fastened with a bow at the side, are much in favor. All dresses are made sufficiently short in front to show the fancy stockings and shoes. With these white dresses large white tarlatane shawls with deep fringes, or some of the many thousand mantelets of fancy silks, either blue, rose-colored, lilac, &c., more or less ornamented with trimmings of the same material, or black lace, are worn. Small velvet mantelets, black, green, or blue, lined with white silk and trimmed with broad braid on the edge, are in request for evening costume, as an elegant preservative against the night air. Bonnets are of the same materials, or kind of small pelerine, have the sleeves half long and loose, so as to avoid the appearance of a winter dress, or disarranging the under dress.

Bonnets have not altered yet in shape; they are round in the front, and have a point in the chin, with a very small round full dress bonnets, which are of the Pamela form, and worn by some pretty women, whose face sets this shape off to advantage.—Straw bonnets are trimmed with flowers of the most simple character; a bouquet is fastened on the left side, and a long scarf is arranged. Water lilies, branches of ivy, or a bouquet of corn-flowers, are worn on bonnets by the waiter-maids.

There are some very charming and new patterns in silks, for redingotes, and for more dressy costume. Some are striped, or embroidered organdies with flounces, some embroidered in colors, others in white with lace intermixed, are much sought for. For morning promenade, robes of coutil, foulard, toile de Norwege, or peil de chine, embroidered in crochet, or mutaches in different shades, are worn.

To give the dresses of bunge a rich and heavier appearance, they are lined with a bright pink or cerise guipe or muslin; we have seen some of this description, the bunges being a white ground in one case, and a mosaic pattern in stripes. This lining, independent of the consistency it gives to the dress, produces a soft and warming effect, which is very pretty.

Among the dresses preparing to be worn at Baden, we have seen one of mauve silk, ruled reticulated in blue taffetas, blue de France, and English green, trimmed with black lace, placed en revers upon the front of the skirt, and either side of the body, which is open, allowing a piece of the silk to be seen instead of the chemisette, and trimmed with black lace and ribbon to match. The half-long sleeves, which are loose, are trimmed with three narrow laces, falling over the arm. A guimpe and under sleeves in large puffs of plain white tulle, rise to this toilette an appearance half negligee, and half dressy. The trimmings are laces on the skirt, bows of ribbon, the shade of the dress, forming four rosges, separated by small buckles of marquoise or burnished gold. The shoes of the same shade as the dress are a mark of good taste in the wearer.

The Bonnet worn at a fete given lately, two young ladies dressed in white linen dresses, trimmed with bouillonnes of the same, ascending to the knee, and covering a bothe and short sleeves; upon these bouillonnes, placed at short distances, are small bows of rose-colored satin. The coiffure a bow of velvet, black, green, or dark blue, with long floating ends, placed upon the side of the head over a rose and its leaves; the large toilette shell comb suited well with this style.

Varieties.

FAITHFULNESS.

The wildest robber of the Bedouin tribes, will never violate the laws of hospitality to a guest who has once tasted of his salt. In Price's Mahommedan History we have an example of the strength of this bond. Yaskoub, the son of Ebu Saya Ex Saliar, having adopted a predatory life, excavated a passage one night into the palace of Dirkem, the Governor of Sewaiet, and after he had made up a convenient bale of gold and jewels and the most costly stuffs, was proceeding to carry off the booty, when he stumbled in the dark, to strike his foot against something hard on the floor. Thinking it might be a jewel or some sort or other, he picked it up, and put it to his tongue, and to his great astonishment found it to be a piece of rock salt. Upon this he immediately laid all on the ground, his avarice gave way to his respect for the laws of hospitality, and throwing down his precious booty, he left it behind him and withdrew empty handed to his habitation. The treasurer of Dirkem on perusing a report of what he had done according to custom, to suspect his charge was equally surprised and alarmed at observing that a great part of the treasure and other valuables had been removed; but, on examining the packages which lay on the floor, his astonishment was not lessened to find that not a single article had been conveyed away. The singularity of the circumstance induced him to report it immediately to his master; and the latter causing it to be proclaimed through the city, that the author of this proceeding had his free pardon, further announced that on repairing to the palace he would be distinguished by the most encouraging marks of favor. Yaskoub availed himself of this invitation, relying upon the promise, which was fulfilled to him, and from that period he gradually rose in power, until he became the founder of a dynasty.

BETTING ON ELECTIONS.—Betting on the result of an election, is a poor way of testing the soundness of one's political opinions, and should be discouraged as much as possible. It is a mere game of chance, and the holder of a bet, nothing better than a species of gambling. The unwary are sometimes entrapped in making two or three bets at once, so arranged that the challenger is almost sure to win. An instance of this sort has just come to our knowledge. A Democrat offers the following bets: first, $10 that he will name 12 States that Cass will get; second, $10 each on the other 18; and third, $100 that he will come out a winner on the two bets. At first sight it appears that he is offering great odds, but on examination it will be seen to be but a trick. The better calculates on winning in this wise. He will name 12 of the States most likely to vote for Taylor, and of course loses that—this is a small part of the transaction. The remaining 18 being more doubtful, he looks to them for at least 10, and if he gets that number, wins on the average, and also $100 on the last bet.

CONUNDRUM.

"My first is the thing that hops,
My second brings us good hay crops,
My whole I set with mutton chops."

Answer—"Sparrowgrass," called by the polite, Asparagus.

☞ A gentleman, having built a large house, was at a loss what to do with the rubbish. His steward advised him to have a pit dug large enough to contain it. "And what," said the gentleman, smiling, "shall I do with the earth which is dug out of the pit?" To which the steward, with great gravity, replied, "*Have the pit made large enough to hold all.*"

☞ "Johnny, my son, will you have some more beans?" "No." "He, what, darling?" "No beans."

A SUBSCRIBER.

TRAVELLING AGENTS.

Mr. C. W. JAMES, No. 1 Harrison street, Cincinnati, Ohio, is our general travelling agent for the Western States, *James R. Snook, J. T. Dowe, T. Gardiner Snack, Frederick J. Moore, John W. Armstrong, Jason Tupler, R. M. Stowes ov, and W. Hemsay.*

Mr. ISRAEL E. JAMES, 160 South Tenth street, Philadelphia, is our general travelling agent for the Southern and South-Western States, assisted by *Jas. K. Wapple, William H. Wild, O. H. P. Dunn, John B. Wild, T. B. Waterman, John Collins, James Dorsey, Isaac D. Guyer, R. S. James and Robt. Barton.*

Mr. HENRY M. LEWIS of Montgomery, Alabama, is our general travelling agent for Alabama and Tennessee.

WILLIAM A. PIERCE is our only Collector of Bills in Boston.

CHAS S. ROWLEY will receive subscribers and receipt bills for this paper in the State of Ohio.

MORTIMER T. WEBB, do. do. do. for New York State.

FRANCIS SHEPHERD, do. do. for the Eastern States.

JACOB H. HASSENPLUG, do do in Pennsylvania.

JUSTUS WHITE, do. do in New York and Ohio.

J. L. SPROGLE, do. do. in Ohio, Ky.

CHAS. W. SARTORI is our only Collector for New Orleans.

WM. WHITE, Jr. Raleigh, N. Carolina, is Agent for this paper.

THE SATURDAY EVENING POST May be obtained weekly of the Periodical Depot of *JAMES A. GILBERT & Co., Publishers, &c., No. 22 Ann Street, New York City.*

HOTCHKISS & CO., Boston, Mass.

" MILTON BOULEMET, Mobile, Alabama.

" J. C. MORGAN, New Orleans, La.

" GEO. W. NOBLE, Louisville, Ky.

" M. P. MOERS, Pittsburg, Pa.

" W. TAYLOR & Co., Baltimore Md.

" SAFFORD & PARK, Norwich, Connecticut.

" F. HAGAN & Co., Nashville.

Subscriptions will be received at either of the above mentioned Depots.

OUR MAIL RECEIPTS.

Selected Poetry.

BREVITY OF LIFE.

BY FRANCIS QUARLES.

Behold!
How short a span
Was long enough of old,
To measure out the life of man!
In those well-tempered days, his time was then
Surveyed, cut up, and found but threescore years and ten.

Alas!
And what is that?
They came, and ebb, and pass,
Before my pen can tell thee what.
The parts of time are swift, which having run,
Their whole room, what engine's fit, that dare stand to mark it done.

Our days
Begun, we lead
To sleep, to ease pangs
And end, until the first comes end:
Twelve evening moons, twice five times told, we give
To unmoistened lust—we rather breathe than live.

We spend
A test years' breath
Before we apprehend
What 'tis to live, or fear a death;
Our childish dreams are filled with painted joys
Which please our senses awhile, and waking, prove to toys.

How soon,
How wretched, is
Poor man, that doth remain
A slave to such a state as this!
He lays are short, at longest; few, at most;
They are but bad, at best; yet troubled-out, or lost.

They is
The secret springs
That make our minutes flee
On wheels more swift than eagles' wings:
Our life's a clock, and every gasp of breath
Resembles forth a warning grief, till time shall strike a death.

How soon
Our new born light
Attains to full-aged noon!
And this, how soon to grayhaired night!
We spring, we bud, we blossom, and we blast
Ere we can count our days, our days they flee as fast.

They end
When scarce begun;
And ere we apprehend
That we begin to live, our life is done.
Man, count thy days; and if they fly too fast
For thy dull thoughts to count, count every day thy last.

Thoughts for Parents

EDUCATION OF DAUGHTERS.

From an admirably written medical work recently published by Messrs. Lea & Blanchard, of this city—being a Series of Letters on Females and their Diseases, addressed to his Class by Charles D. Meigs, M. D., Professor in the Jefferson Medical College at Philadelphia, &c., &c.—we take the following conversation between a physician and a young girl and her mother. In this piquant and interesting conversation, the learned and judicious Doctor gives his opinions upon the "forcing system" of education now too much in vogue, and explains the causes of much of the weakness and ill-health in both young girls and women that we see around us. As this is a matter which comes home to every parent's "business and bosom"—using the word business in its highest sense—we hope Dr. Meigs's views will receive what they merit, an attentive perusal and consideration.—*Editor Saturday Evening Post.*

CONVERSATION.

"What is your age, child?"

"Fourteen years, sir."

"Are you sick?"

"No, sir. They say I'm sick, but I don't feel so."

"Have you ever been sick?"

"Yes, I had measles, and scarlet fever, and whooping cough, but that was a long time ago. I have also had some bad colds, occasionally."

"Do you feel strong and healthy?"

"No, not very; but I'm not sick though."

"Are you as fat as ever you were, or are you thinner than you used to be?"

"Why, I am thinner, I suppose, but not much."

"Do you go to school?"

"Oh, yes, I go to ———'s school."

"When does school let in?"

"Eight o'clock in the morning."

"How long before it lets out?"

"Half-past one."

"That's five hours—a long session! but what do you do all that time?"

"I am studying my lessons and reciting them."

"What lessons? What is your daily work in school? Tell me all about it! Tell me the whole course of a day's schooling?"

"Why, when we assemble, we have prayers, then a chapter in the Bible, then a hymn, and close with a short prayer; after which I recite my lesson in spelling, then English grammar, and next, one in geography."

"Why, when do you get all those lessons?"

"In the evenings, at home."

"Do they keep you late up?"

"Until nine or ten o'clock, only."

"Well, what comes after geography?"

"Oh! I write copies, and then study my Latin grammar. When I've got the lesson I conjugate the verb, and decline a few nouns and recite some rules."

"What next?"

"I study fifteen or twenty lines in Virgil, which I construe for the teacher."

"Does he make you parse it and scan it?"

"Oh, yes sir, to be sure, always."

"Have you any other studies?"

"Yes, sir, French."

"And you commenced to memory in French, too?"

"Yes, and read, and translate, and write exercises."

"Anything more?"

"Algebra."

"What, algebra? Oh!"

"Yes, sir. And then we have lessons in drawing."

"What do you draw?"

"Landscapes, maps, &c., &c., as figures, flowers, and what not."

"Any music?"

"I have a lesson on the piano three times a week; but mother makes me practice two hours every day, one before I go to school and one in the evening."

"My poor child, I am sorry for you."

"Why are you sorry for me, doctor?"

"I am sorry to find that you work so hard."

"Oh, no, sir, I am delighted with it."

"No doubt! no doubt! but it will ruin your health. I don't believe there is anything the matter with you now but exhausting. Hinn your dear little heart, you ought to be chasing butterflies, or training flowers, or weaving them into pretty coronals, such as white morning glories, pale as yourself; or you should be dressing dolls, or galloping the pony, or dancing, or dawdling. You must not do so much work at school, and you shall not, if I can prevent it. But come, tell me about your health. Do you walk out to Schuylkill every day? or as far as the College?"

"Oh, no, I've no time! Didn't I tell you I go to school at eight o'clock and come out at one? and then I have two hours in school afternoons."

"The d—l you have?"

"What did you say, doctor?"

"Nothing, only an ejaculation; an exclamation. When do you get to bed, my dear?"

"About ten o'clock, or soon after ten."

"Do you sleep soundly?"

"Not always, I often get frightened in my sleep with what they call nightmare."

"Not to be wondered at. I should think your poor little head would be too tired to sleep soundly, and that you would have a nightmare in the shape of a monstrous Latin grammar, or dictionary with a pair of spectacles as big as two moons on to pose, staring at you from a pair of dead looking eyes. Do you eat hearty breakfasts?"

"No, doctor. I have but little appetite for breakfast. I take some cold water and a slice of bread and butter, and make haste to school after my piano practice, for I am so tired in the morning that I can hardly get up, and that keeps me late"

"How's your dinner?"

"Oh, I take pies and preserves, but I can't bear meat, and as for soup, I hate it."

"Oh, dear! poor child! Also for you! Come here, sit by me, and let me feel your pulse. Don't be frightened. There, now. Your pulse beats eighty times a minute; and you are fourteen years old you said. You are breathing twenty times a minute. Are you oppressed in breathing?"

"What do you mean, doctor?"

"I mean to ask if you can draw a great long breath. So—try it now."

"Why, it hurts me."

"Where does it hurt you?"

"Nowhere in particular; it is rather disagreeable than painful. It seems like weakness and a tired feeling."

"It does not make you cough, does it?"

"No, doctor."

"Have you headache often?"

"Oh, yes, my head always aches when I wake in the morning; and if I run, or skip the rope, it aches, and aches, and hurts dreadfully."

"I should think so. When a body is pale like you, any exercise makes the head beat and ache. Do you remember ever to have had red cheeks?"

"Oh, yes, doctor. My cheeks, when I was ten years old, were as red as the inside of a coach cheek."

"Have you grown much of late?"

"Oh, monstrously; I have grown half a head taller in eighteen months."

"Where's your mamma?"

"She's opposite."

"Oh, call her to me. You need not come back yourself. I shall send the post when I want you."

"Pray, madam," said I to Mrs. ———, "what do you suppose ails Miss Mary?"

"I can't imagine what it is that has changed her so, doctor. She used to be the healthiest child in the house, merry as a grig, always singing and dancing; but now she is dull and languid, and has grown pale and thin, and has no natural relish for food. I suppose it is a change working in her. Don't you think so, doctor? She is fourteen?"

"I cannot tell. It is probable that her constitution is making an effort in that way; but I wished to ask you some questions that I did not like to address to the child herself. Can you tell me what is the state of her digestion?"

"As to that, she is very irregular, sometimes voracious and then again very month the reverse, and that without any evident cause for it. I suppose it may be owing to her living, for I can't get her to eat any good food. She likes nothing but cakes and sweetmeats, candies, and all such trashy food."

"Is there any change in her temper?"

"Yes, doctor. She is more irritable and cross than is her nature to be, and she is easily put out; the least thing makes her cry. Indeed, we find her very much changed of late."

* * * * * * *

"We are very much concerned about her, for we find she is growing pale, thin, and lounging, and cannot be persuaded to walk out, nor does she like to go out in the carriage. Nothing pleases her so much as books. If you give her a book and a sofa she is perfectly satisfied. But I fear she reads too much, and that her lessons are exhausting her."

"My dear madam, I think if I might venture to speak Latin, I should say rem acu tetigisti—you have hit the nail on the head; and I am much afraid you will destroy her health unless you make some change in her mode of education."

"But, doctor, that is very difficult. You know that schools are managed by classes, and that we with connection's effect that the blood will again reach to, and distend the tissues on the surface, and the most distant parts of the limbs. In order to receive any benefit from the bath, there ought to be some degree of such a reaction, but it is well nigh morbid, when it comes too slowly. A person coming from the bath and remaining cold, or even quite cool, for half an hour, has been in it too long. Many persons suffer from the bath such a concentration of the blood in the great cavities, as the chest, and head, that they feel themselves oppressed in breathing, or giddy and affected with headache, upon leaving the water. I have seen many such coming from the bath unable to see, and with intense cephalalgia, and only relieved by the act of vomiting; all which was dependent on the rushing of the blood to the brain, where it had been driven by the cold water from the extremities and the skin.

"Take care of Mary's diet.

"Let her eat beef, mutton, or poultry, once a day, don't give her the sort of vegetables we correctly country, and with a disinterested love, that deserved some better aim, ever proved it on his helpmate, as the first-rate of life, to get all she could, and keep all she got. He died, and Mrs. Stiles became more and more religious and alms-giving, but she remained
